# Introductions

- Your experience with web development?
- Your experience with Java EE development?
- What do you want to get from this session?
- Experience with Spring MVC, GWT, Rails, Grails, Wicket or Struts 2?

Blogger on

Who is **Matt Raible**?

# Session Agenda

- The Problem with Web Frameworks
- The Candidates
- Comparison Points
- The Matrix
- Conclusion
- Q and A

# The Problem

tapestry

Struts<sup>2</sup>

# How do you choose?

ELIMINATE, DON'T INCLUDE

... while I'd \*love\* to see life made simpler for Java web developers, and a lot of the things happening in Struts2 are going that way -- it won't be me doing it.

I've gone over to the dark side :-)) and much prefer to develop in Rails -- for the conciseness mentioned above, but also because I don't ever have to do a "build" or "deploy" step during my development cycle any more. But you guys and gals need to be reminded that \*this\* is the kind of thing you are competing against if you expect to attract Rails developers ... or to avoid even more "previously Java web developer" defectors like me :-)).

*-- Craig McClanahan, 10/23/2007*

<http://markmail.org/thread/qfb5sekad33eobh2>

# Choosing a Framework

- Choose a short list of frameworks to prototype with.
- Create an application prototype with each framework.
- Document findings and create a matrix with important criteria.
- Create presentation to summarize document.
- Deliver document, presentation and recommendation.

# 2007: 6 Important Factors

- Request, Component or RIA Framework
- Ease of Development
- Project Community
- Project Future and Roadmap
- Maintenance
- Technical Features

# Request, Component or RIA

- Are you developing...
  - ... a consumer facing site?
  - ... a desktop-like, application?
  - ... a media-rich site?
- If the framework is built for state-fulness, should you use it in a stateless architecture?

# Types of Applications

- High-traffic, internet facing, infinite scalability
- Intranet-based, behind the firewall, few users
- Products, to be maintained for 5-10 years
- Legacy Backend
- Others?

# Types of Frameworks

- Request Based Frameworks
  - Struts 2, Spring MVC, Rails, Stripes
- Component Based Frameworks
  - JSF, Tapestry, GWT
- Rich Internet Applications
  - Flex
- One Size Fits All
  - Grails

# Do they matchup?

- High-traffic, internet facing, infinite scalability
  - **Request-based frameworks**
- Intranet-based, behind the firewall, few users
  - **Component-based frameworks**
- Products, to be maintained for 5-10 years
  - **Largest Community, Most Vendor Support**
- Legacy Backend
  - **Same Language as backend**

# 2010: Now There's 20

1. Developer Productivity
2. Developer Perception
3. Learning Curve
4. Project Health
5. Developer Availability
6. Job Trends

# 2010: Comparison Points

7. Templating

8. Components

9. Ajax

10. Plugins or Add-Ons

11. Scalability

12. Testing Support

# 2010: Comparison Points

- i18n and l10n
- Validation
- Multi-language Support (Groovy / Scala)
- Quality of Documentation/Tutorials
- Books Published
- REST Support (client and server)

# 2010: Comparison Points

- Mobile / iPhone Support
- Degree of Risk

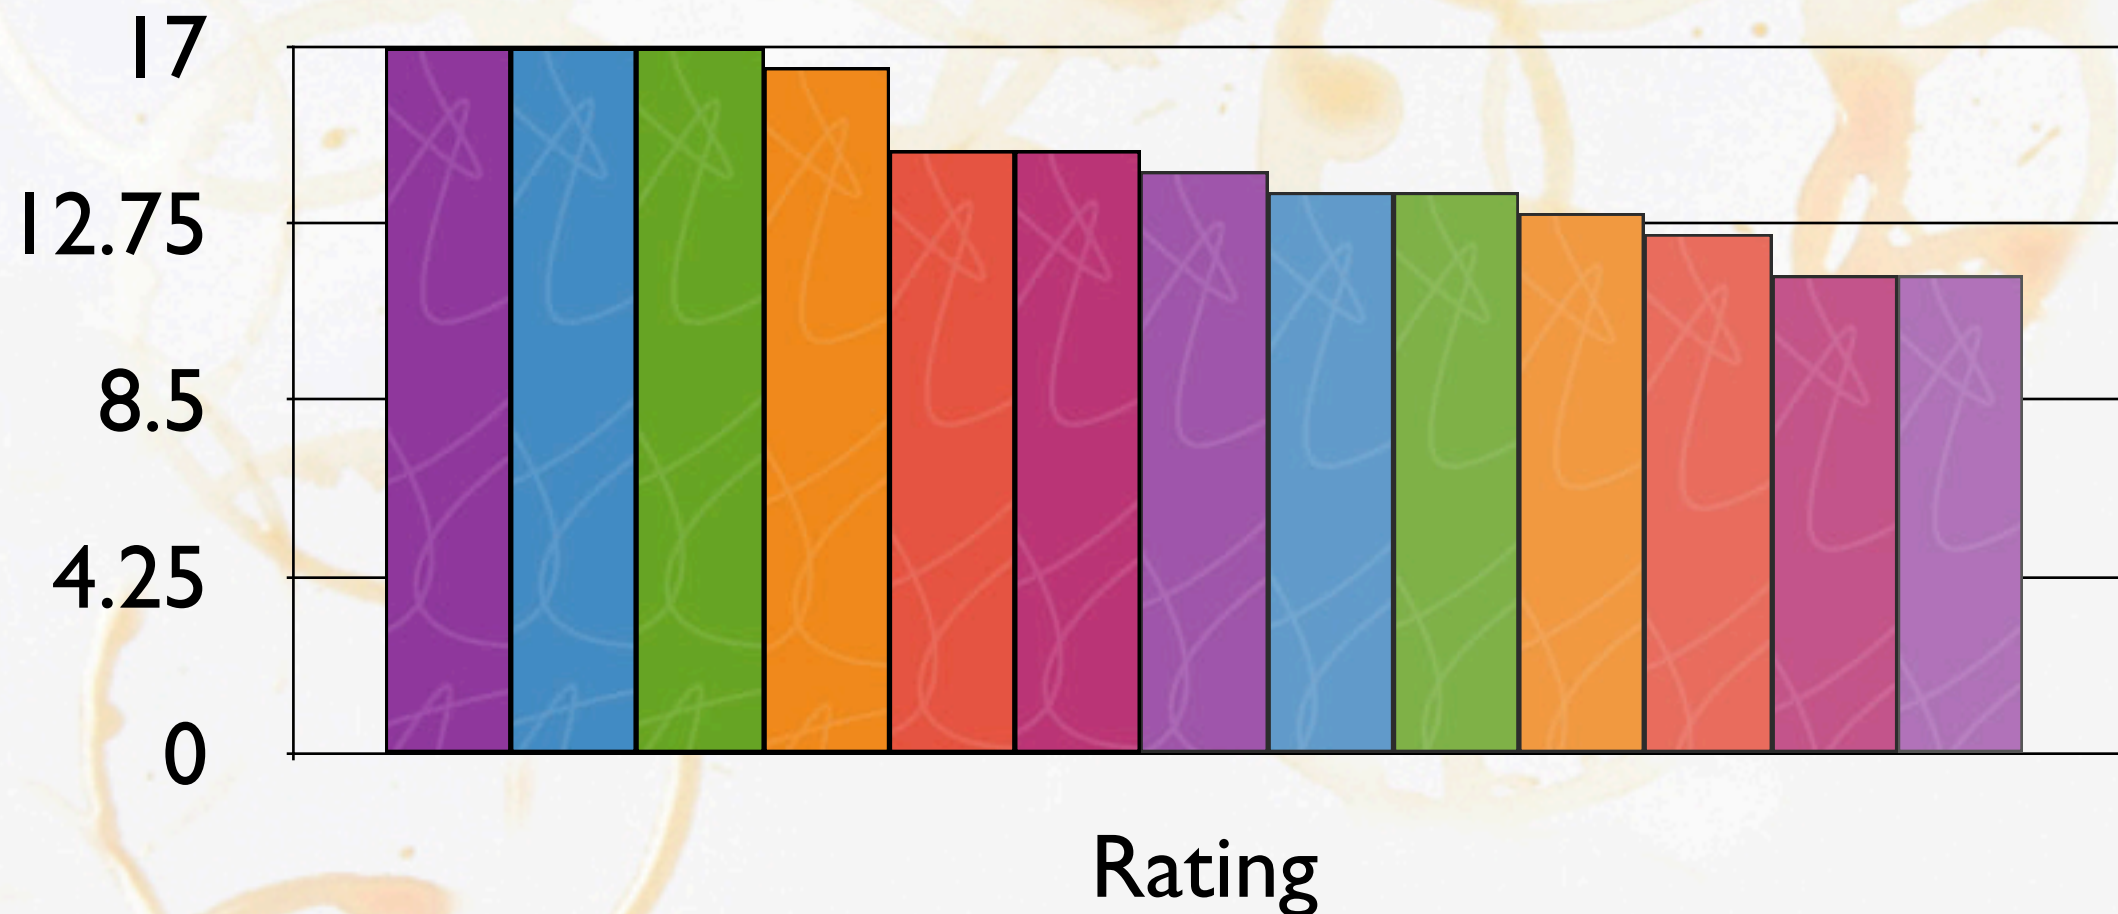

# Comparison Matrix

Criteria	Struts 2	Spring MVC	Wicket	JSF	Tapestry	Stripes	GWT	Grails	Rails	Flex	Vaadin	Lift	Play
Developer Productivity	0.50	0.50	0.50	0.50	0.50	0.50	1.00	1.00	1.00	0.00	0.00	0.50	1.00
Developer Perception	0.50	1.00	1.00	0.00	0.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00

# Matrix Results

# Matrix Results

- Spring MVC (17)
- GWT (17)
- Ruby on Rails (17)
- Grails (16.5)
- Wicket (14.5)
- Struts 2 (14.5)

# Pros and Cons

# Spring MVC

## ● Pros

- Easy Configuration with Annotations and Conventions
- Integrates with many view options seamlessly: JSP / JSTL, Tiles, FreeMarker, Excel, PDF, JSON
- Excellent REST Support

## ● Cons

- Instant reload not built-in, need JRebel or Spring Roo
- No open development process, need to be SpringSource
- Ajax requires 3rd-party library (can be a good thing!)

# GWT

- **Pros**

- Write Java => Produces Optimized JavaScript
- Easy to learn and develop with standard Java Tools
- Vibrant Community

- **Cons**

- You have to know Java
- Slow to compile, difficult to test
- More like a JSP Tag Library than a web framework

# Ruby on Rails

- **Pros**

- Easy to learn and understand for Web Developers
- Lots and lots of documentation
- Passionate Community

- **Cons**

- Slightly less performant by default
- Dynamic language means more tests
- Development Tools and Debugging

# Grails

- **Pros**

- Easy dynamic language transition for Java Developers
- Groovy
- Plugins for all types of applications

- **Cons**

- Groovy learning targets Java Developers
- Stack traces are horrendous
- Knowledge of underlying frameworks not required, but helpful

# Wicket

- **Pros**

- Great for Java Developers
- Tight binding between pages and views
- Active community - support from creators

- **Cons**

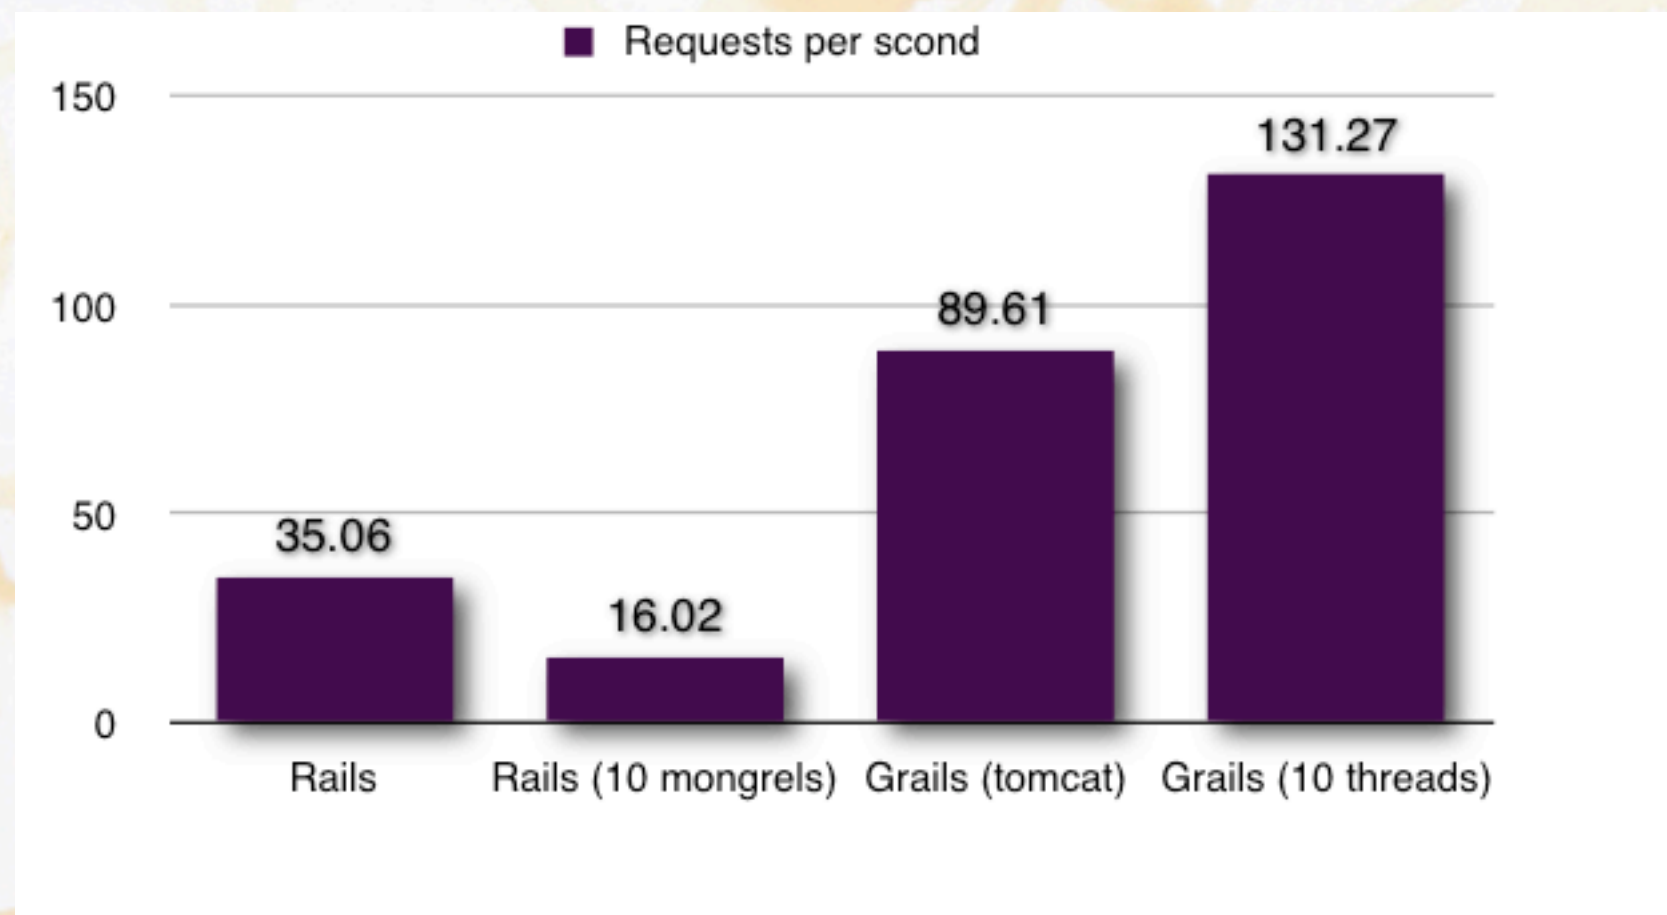

- No Jobs or Developers
- Stateful by default
- HTML Templates live next to Java code by default

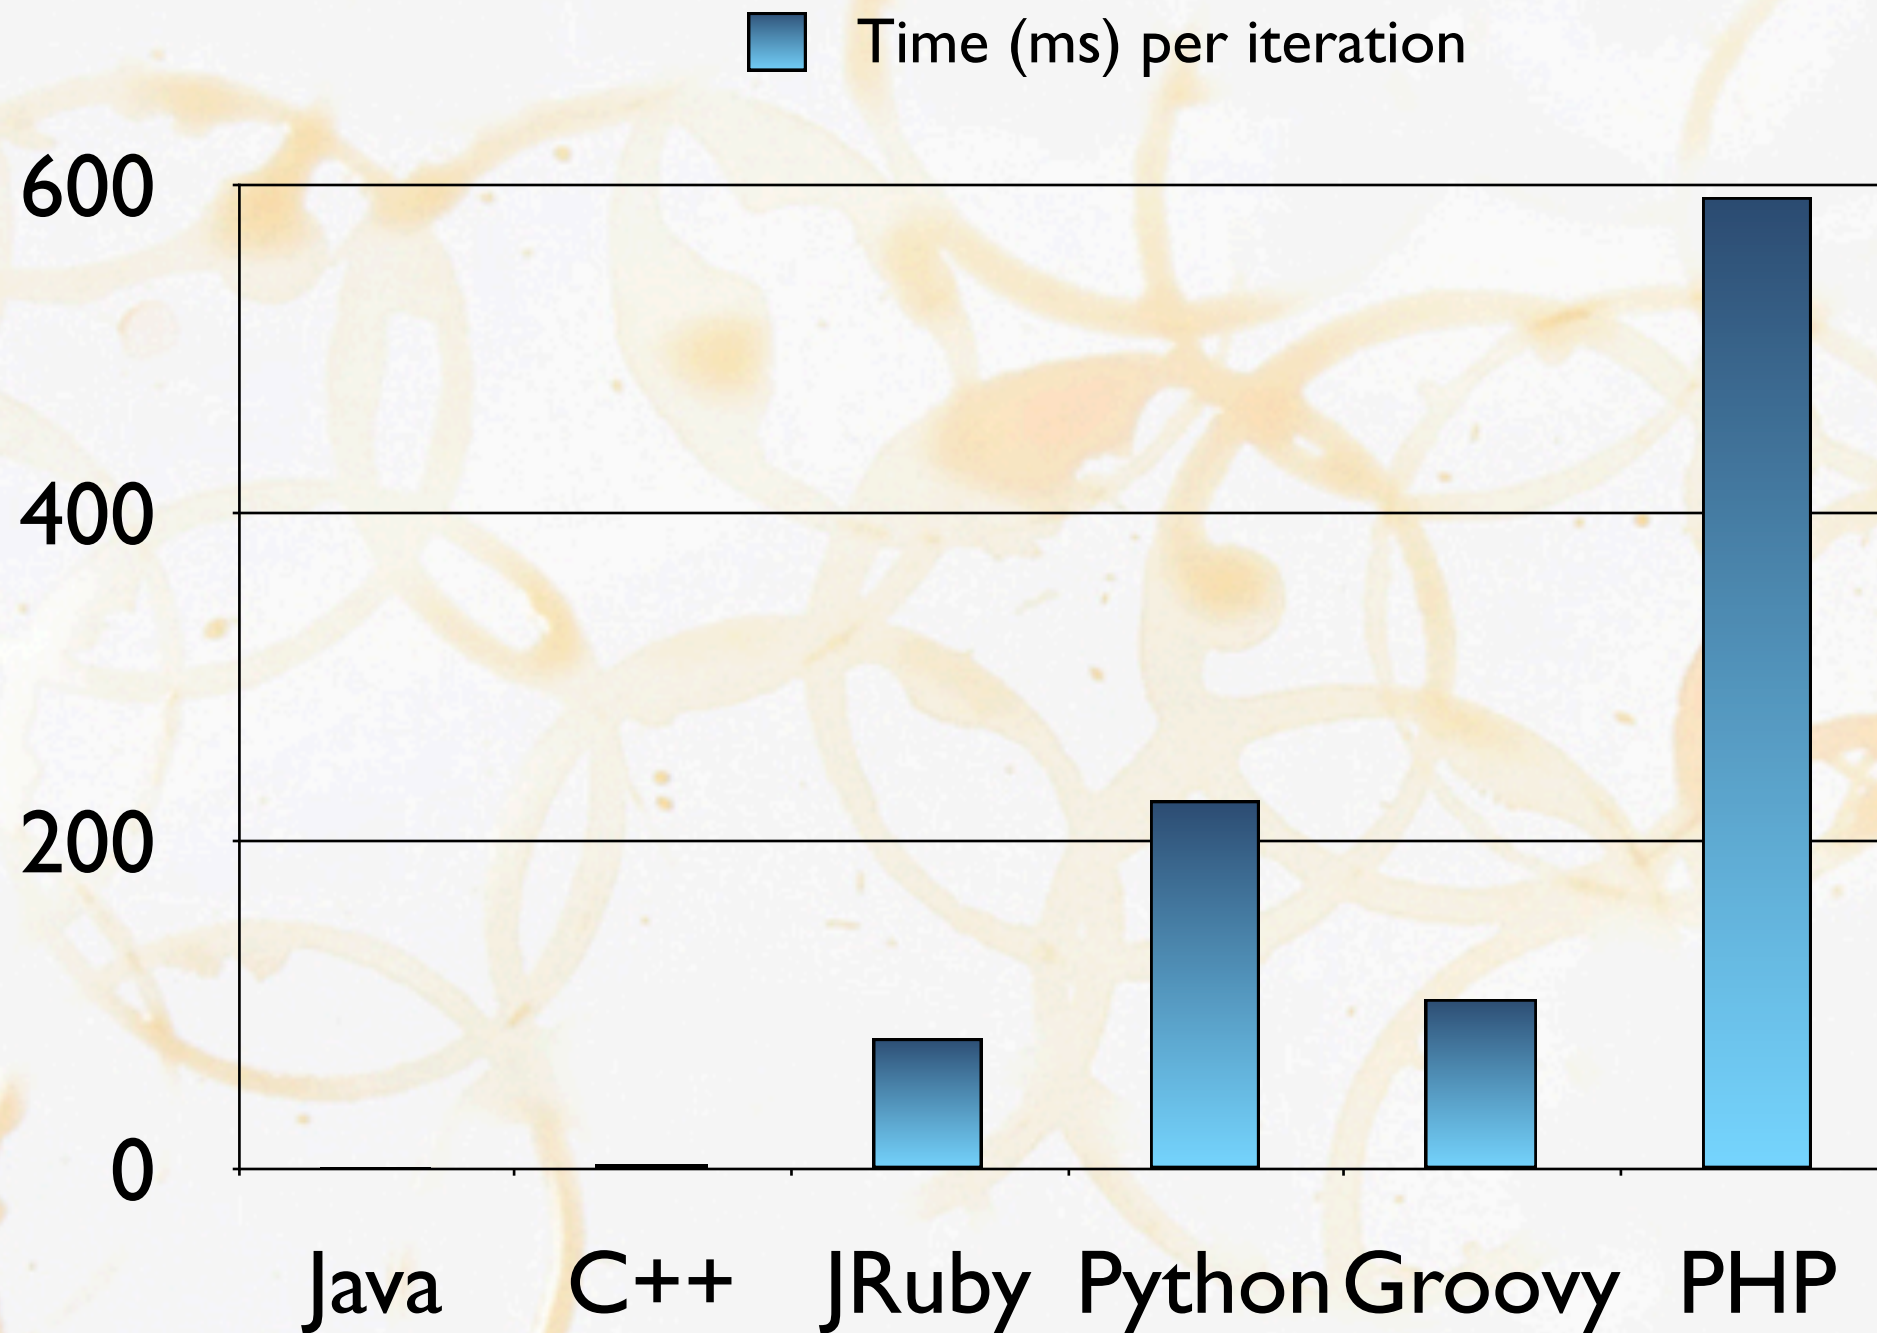

# Rails vs. Grails

● <http://grails.org/Grails+vs+Rails+Benchmark>

- Grails: 40 requests per second, Rails: 32

# Language Performance

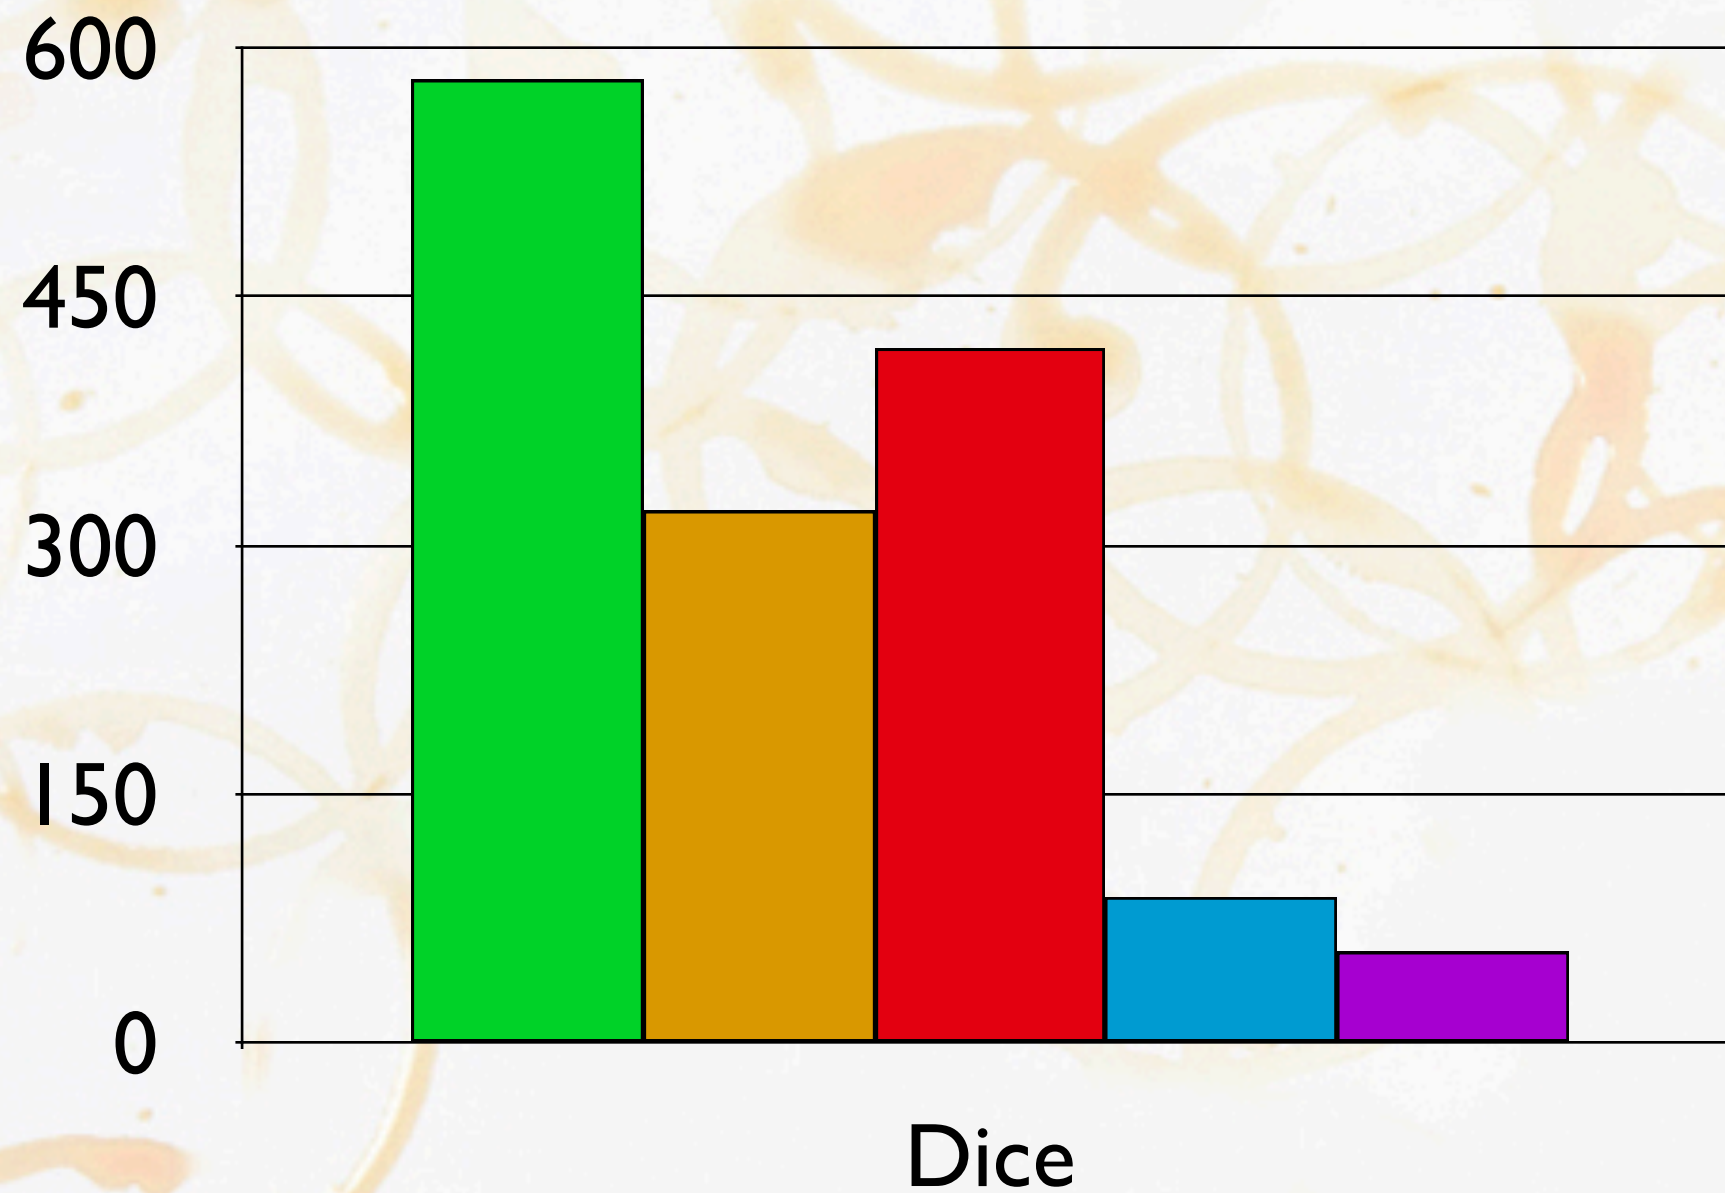

<http://blog.dhananjaynene.com/2008/07/performance-comparison-c-java-python-ruby-jython-jruby-groovy/>

- Active Community @ <http://wicket.apache.org/help/email.html>
- Recommended Books:
  - Wicket in Action
  - Pro Wicket

## CONCLUSION

*What if there is no "best" web framework?*

# How to Choose?

- Prioritize a list of features that are important to your application.
- Pick 3-4 frameworks and do a 1-week spike with each, developing the same application.
- Document and rank each framework against your list of features.
- Calculate and choose!
