open **YOUR** mind

Web Frameworks of the Future

Flex, GWT, Grail, and Rails

Matt Raible

<http://raibledesigns.com>

Introductions

- ▶ Your experience with web applications?
- ▶ Have you heard of SOFEA or SOUI?
- ▶ Experience with Rails, Grails, GWT or Flex?
- ▶ What do you want to get from this session?
- ▶ Framework Experience:
 - ▶ Struts 1, Struts 2, Spring MVC, JSF, Stripes, Tapestry, Wicket, Rails, Grails, Flex, GWT, Django

Who is Matt Raible?

- ▶ Java Blogger since 2002
- ▶ Power user of Java Web Frameworks
- ▶ Author of Spring Live and Pro JSP 2.0
- ▶ Founder of AppFuse (<http://appfuse.org>)
- ▶ Member of Java EE 5, JSF 1.2 and Bean Validation Expert Groups
- ▶ Lead UI Architect at LinkedIn
- ▶ Father, Skier, Cyclist and Beer Connoisseur

How do you choose?

Eliminate, Don't Include

**It's not about including choices,
it's about eliminating them.**

Session Agenda

- ▶ SOFEA and SOUI
- ▶ REST Backend
 - ▶ Rails
 - ▶ Grails
 - ▶ Comparison
- ▶ Rich Frontend
 - ▶ Flex
 - ▶ GWT
 - ▶ Comparison
- ▶ Conclusion and Q & A

SOFEA and SOUI

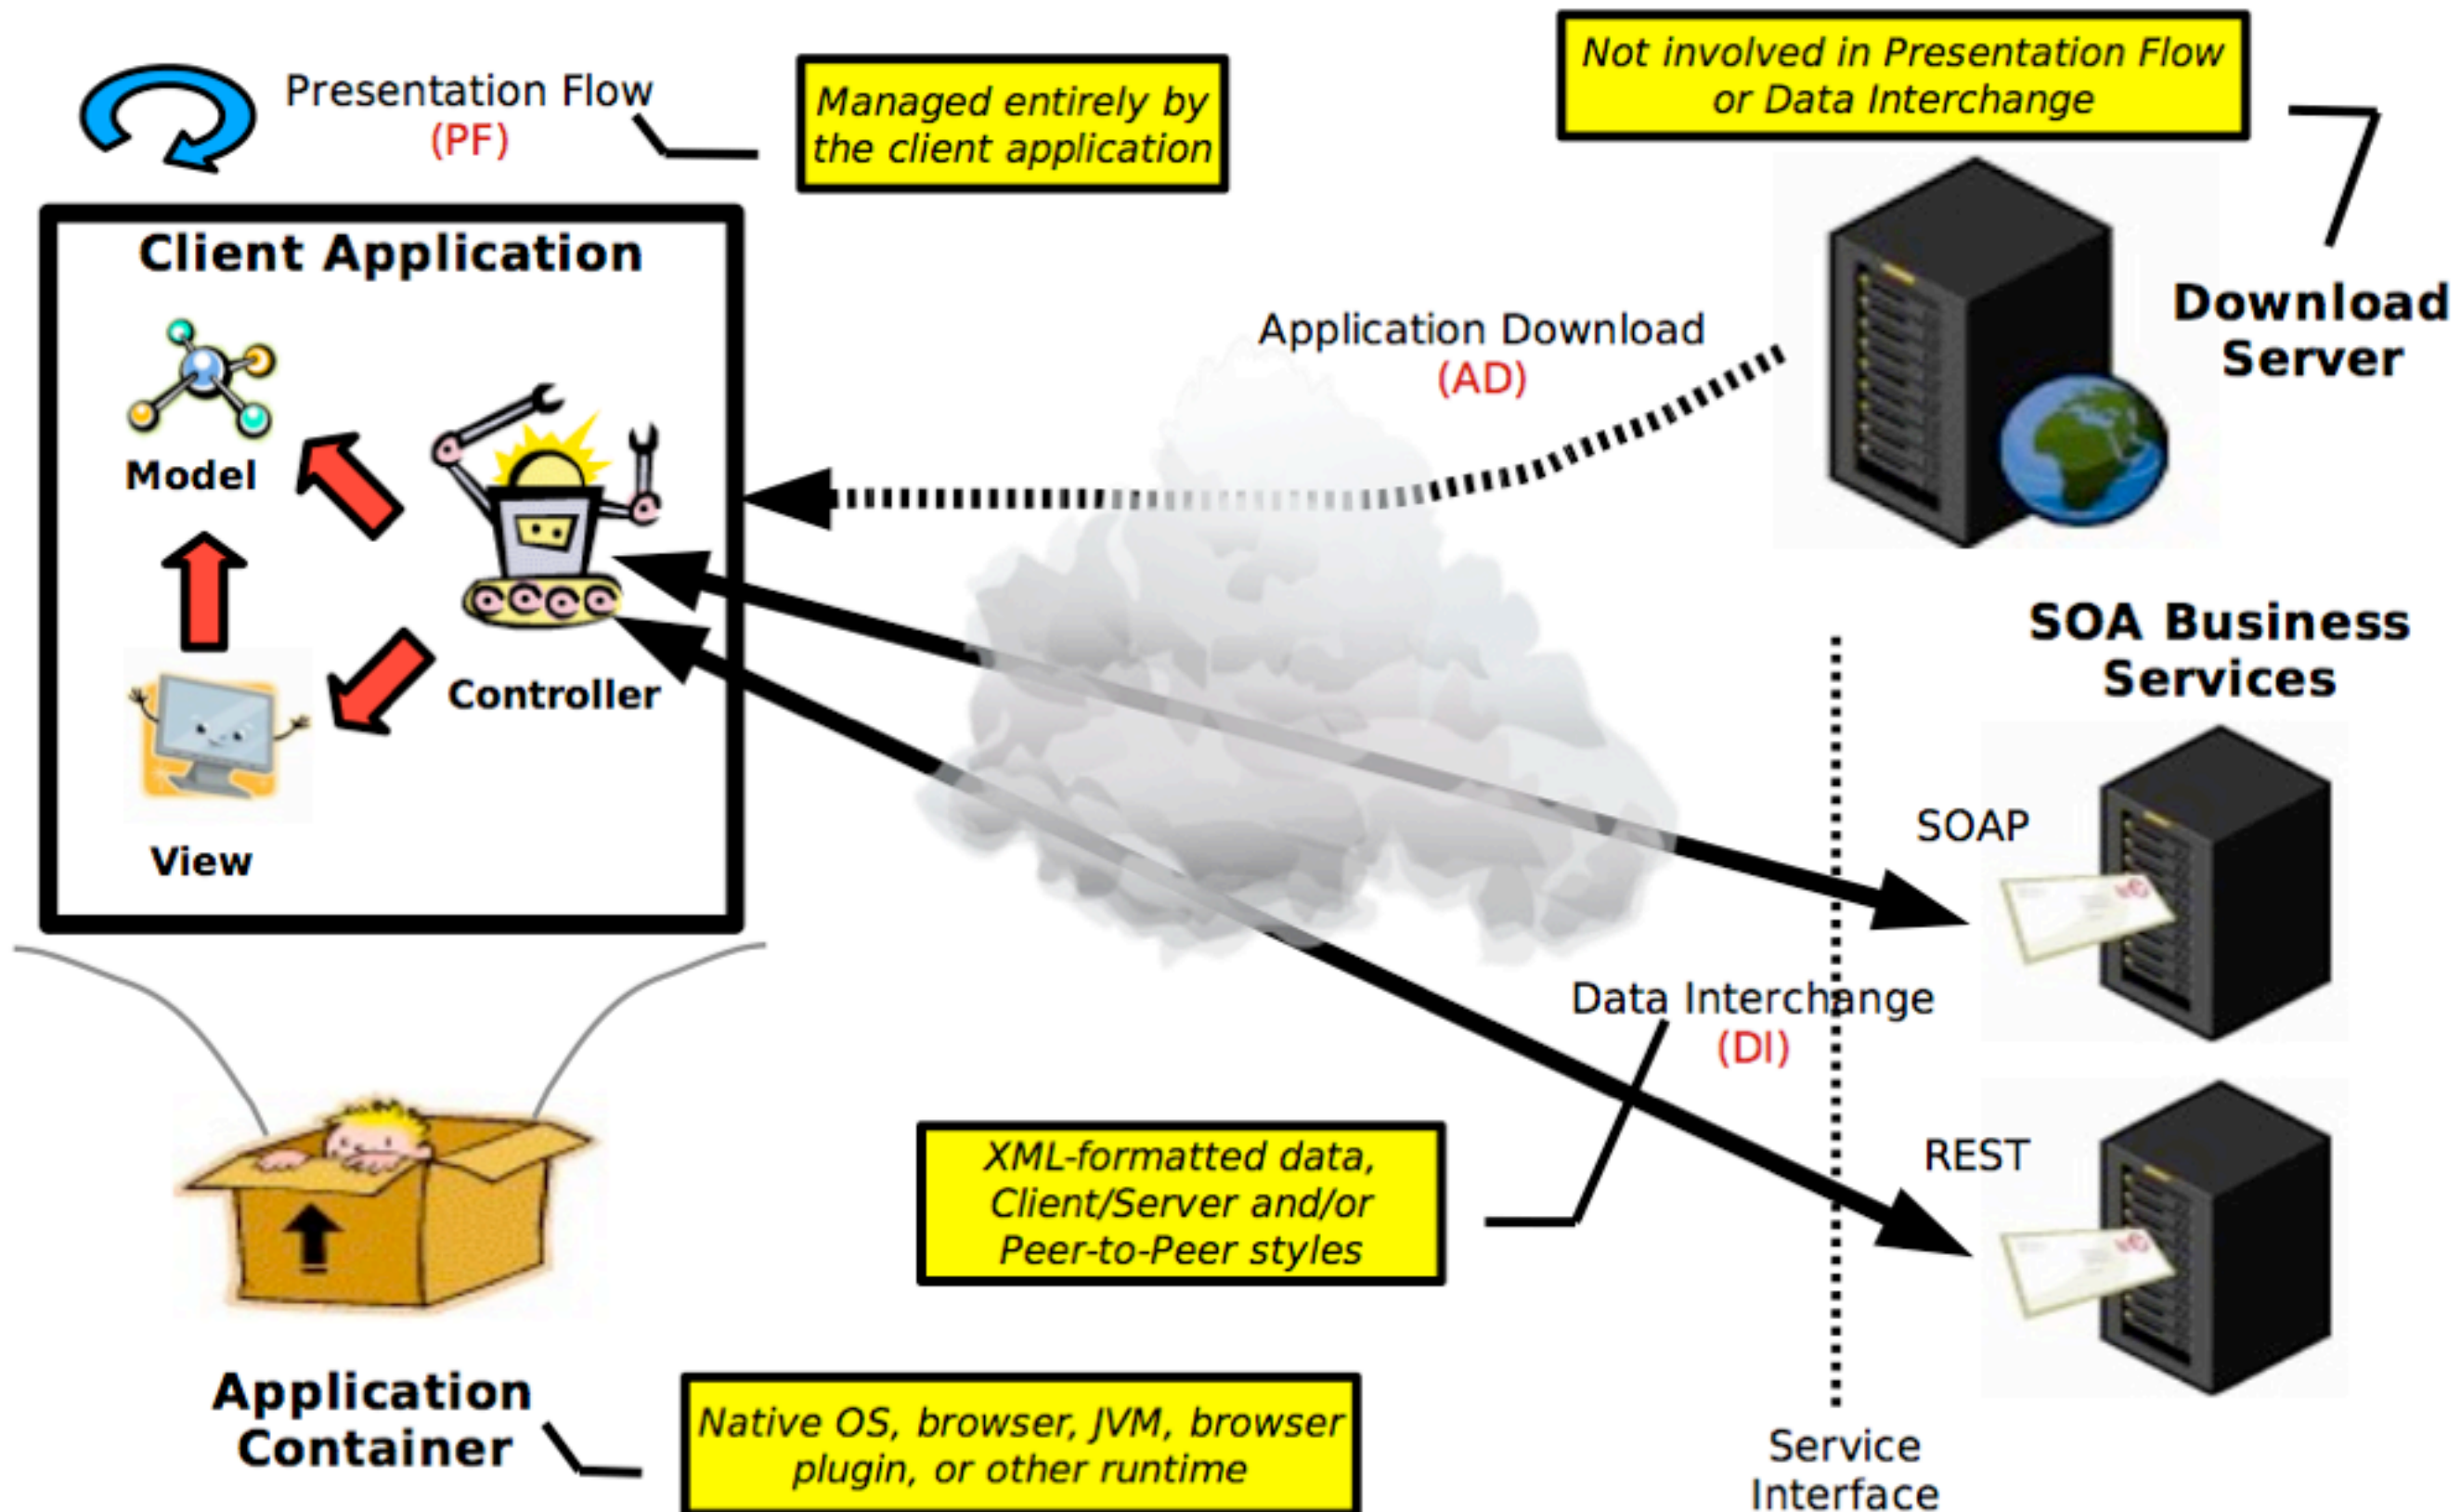

- ▶ **SOFEA** first introduced by Ganesh Prasad, Rajat Taneja and Vikrant Todankar in **Life above the Service Tier** on 10/12/2007.
- ▶ http://www.theserverside.com/news/thread.tss?thread_id=47213
- ▶ **SOUI** introduced by Nolan Wright and Jeff Haynie in early November. 2007.
- ▶ <http://www.infoq.com/news/2007/11/soui-death-of-mvc2>
- ▶ SOFEA Authors have since formed the Thin Server Architecture Working Group.
- ▶ <http://www.thinserverarchitecture.com>
- ▶ Nolan and Jeff developed Appcelerator.
- ▶ <http://www.appcelerator.org>

SOFEA Principles

- ▶ Decouple the three orthogonal Presentation Tier processes of **Application Download**, **Presentation Flow** and **Data Interchange**. This is the foundational principle of SOFEA.
- ▶ Explore various Application Download options to exploit usefully contrary trade-offs around client footprint, startup time, offline capability and a number of security-related parameters.
- ▶ Presentation Flow must be driven by a client-side component and never by a server-side component.
- ▶ Data Interchange between the Presentation Tier and the Service Tier must not become the weakest link in the end-to-end application chain of data integrity.
- ▶ Model-View-Controller (MVC) is a good pattern to use to build the Presentation Tier.

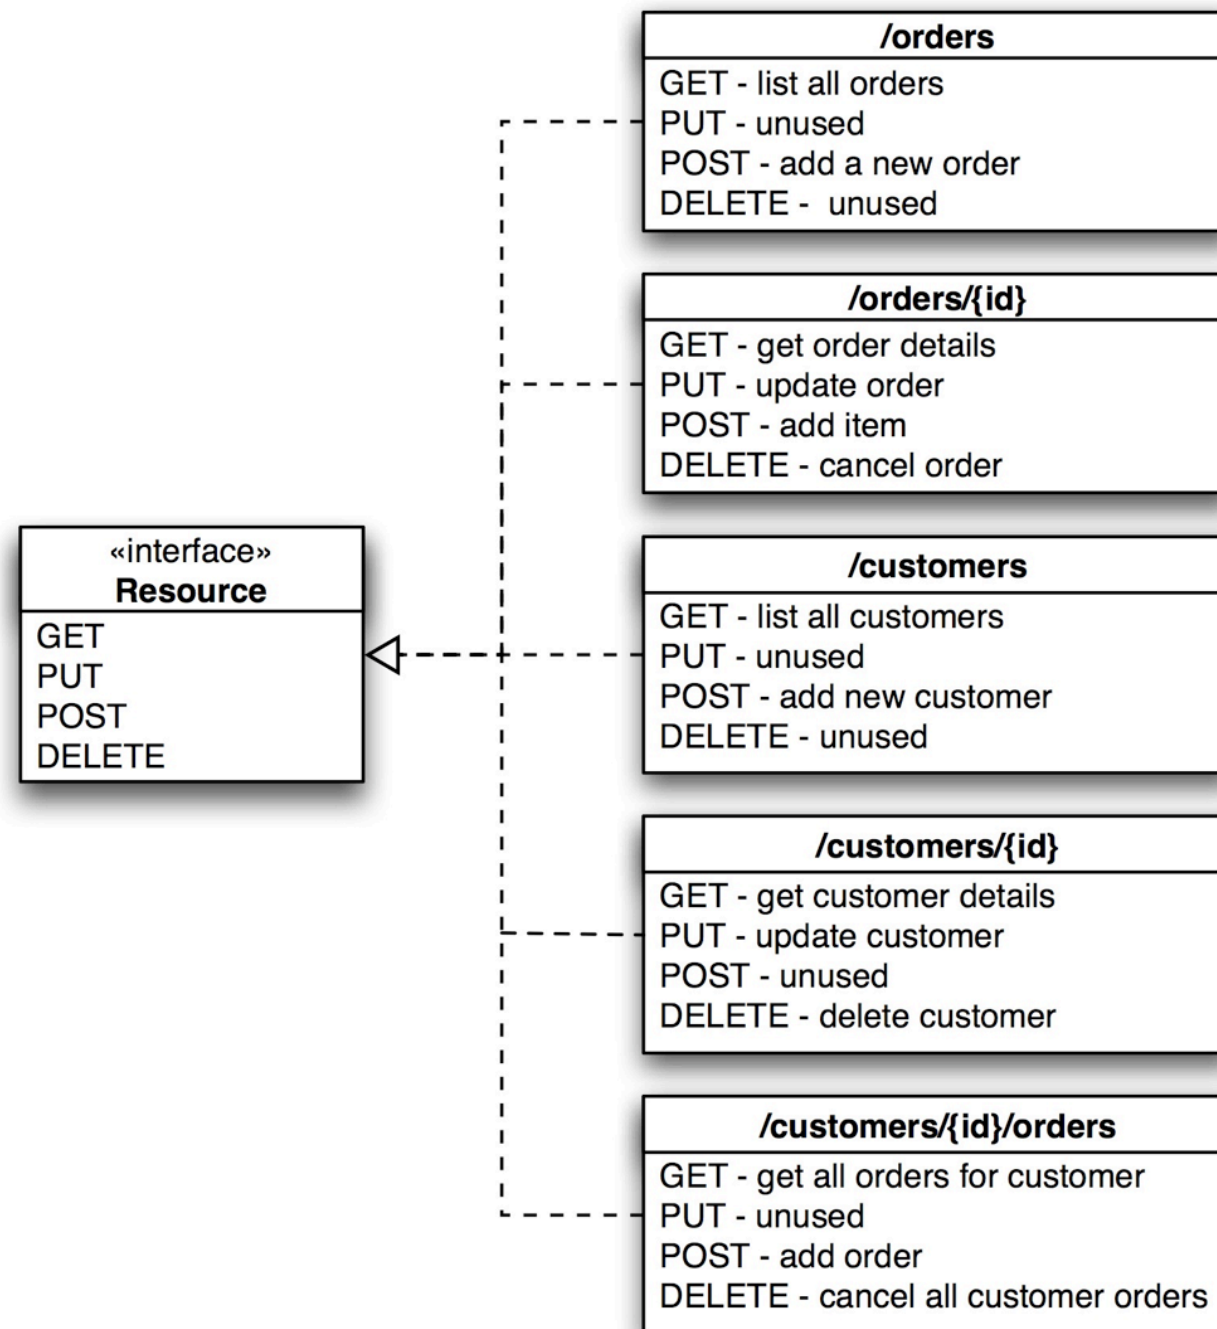

SOFEA (Service-Oriented Front-End Architecture)

Recommended Frameworks

- ▶ DHTML/AJAX frameworks for Modern Browsers
 - ▶ Largely handcoded with third party JavaScript libraries
 - ▶ Google Web Toolkit (GWT, GWT-Ext)
 - ▶ TIBCO General Interface Builder
- ▶ XML Dialects for Advanced Browsers
 - ▶ XForms and XHTML 2.0
 - ▶ Mozilla XUL
 - ▶ Microsoft SilverLight/XAML
- ▶ Java frameworks
 - ▶ Java WebStart (with/without Spring Rich Client)
 - ▶ JavaFX
- ▶ Adobe Flash-based frameworks
 - ▶ Adobe Flex
 - ▶ OpenLaszlo

REST

Ruby on Rails

- ▶ REST is enabled by default with Scaffolding
- ▶ Scaffolding doesn't support one-to-many UI
- ▶ **ActiveScaffold** fixes one-to-many, supports REST and adds Ajax
- ▶ Rails 2.1 and ActiveScaffold 1.1.1
 - ▶ ~~script/install plugin and git clone~~
 - ▶ Download and unzip works...
 - ▶ ...but, you need 2.1 patch from:
 - ▶ <http://github.com/lightningdb/activescaffold/tree/master>
 - ▶ Warbler has issues with ActiveScaffold

RESTful Rails

```

- ▶ Grails 1.x has REST support built-in
- ▶ Scaffolding does not support REST by default
- ▶ Adding REST support to Scaffolding
 - ▶ <http://fbflex.wordpress.com/2008/05/15/rest-service-xml-output-in-grails-via-content-negotiation>
 - ▶ Fix for Firefox 3: <http://www.nabble.com/scaffolding-rendering-defaulting-to-XML-now-td18540185.html>
- ▶ Scaffolding insufficiently supports one-to-many UI
- ▶ One-to-many support possible if you modify templates
 - ▶ http://www.stainlesscode.com/site/comments/grails_one_to_many_scaffolding

Rails vs. Grails

- ▶ <http://grails.org/Grails+vs+Rails+Benchmark>
- ▶ Grails: 40 requests per second, Rails: 32

Language Performance

My LinkedIn Network

Flex + Rails

- ▶ Flex Scaffold
 - ▶ <http://www.railslodge.com/plugins/717-flex-scaffold>
- ▶ Flex e-Genial Scaffold
 - ▶ <http://rubyforge.org/projects/flexscaffold>
- ▶ WebORB for Ruby on Rails
 - ▶ <http://www.themidnightcoders.com/weborb/rubyonrails/index.htm>
- ▶ `<mx:HTTPService id="..." url="..." resultFormat="..." HTTPMethod="..." result="..."/>`

- ▶ Pros:
 - ▶ Produces Flash UI
 - ▶ Funded by Adobe
 - ▶ Has many successful client stories
 - ▶ Supports REST easily
- ▶ Cons
 - ▶ Not Search Engine Friendly
 - ▶ Doesn't render HTML content well
 - ▶ Doesn't print well by default
 - ▶ No Zero Turnaround w/o IDE

GWT + Grails

- ▶ GWT Plugin
 - ▶ <http://grails.org/GWT+Plugin>
 - ▶ Uses Server-side RPC
- ▶ GWT has limited support for REST
 - ▶ JSONRequest
 - ▶ GWT-REST (works best with Rails)
 - ▶ Sonatype GWT REST (in development)
 - ▶ Restlet API (in development)

- ▶ Pros:
 - ▶ Write Java => Produces JavaScript
 - ▶ Easy to learn and develop with standard Java tools
 - ▶ Vibrant Community
 - ▶ Zero Turnaround in Hosted Mode
- ▶ Cons:
 - ▶ Hard to attach GWT on top of existing code
 - ▶ Doesn't support REST very well
 - ▶ Operates within the confines of the browser's JavaScript sandbox

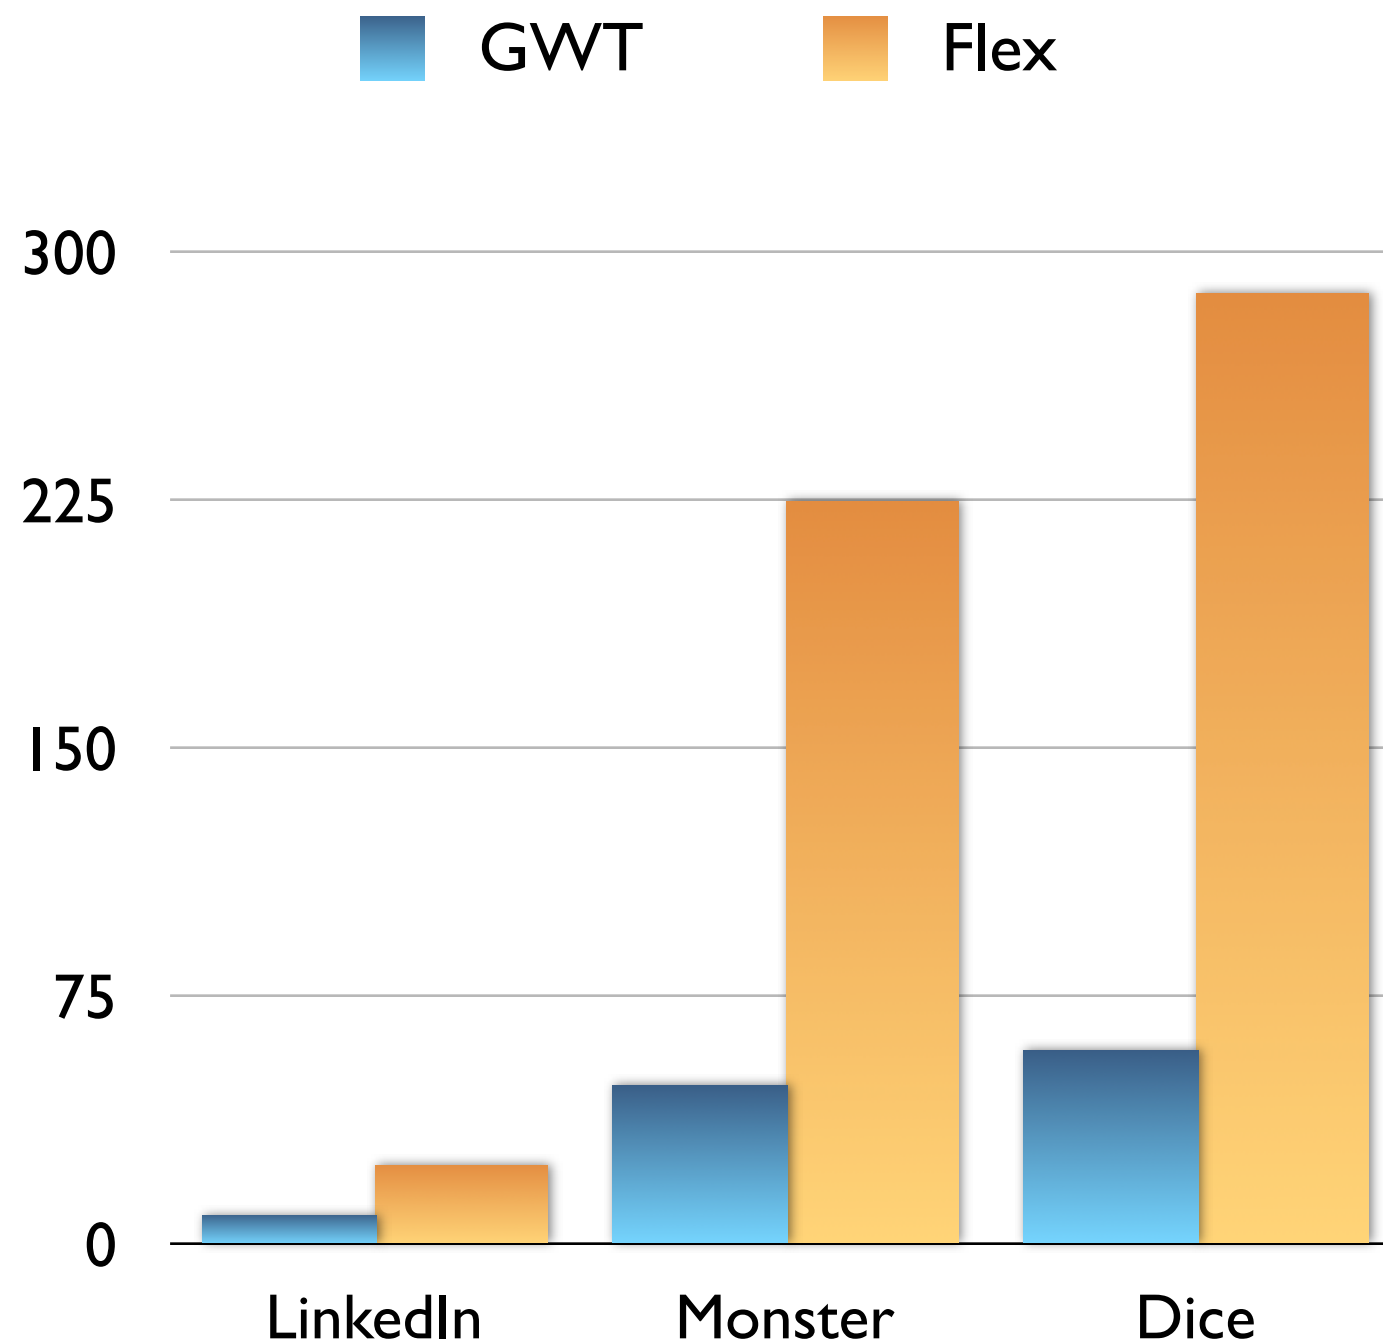

Flex vs. GWT

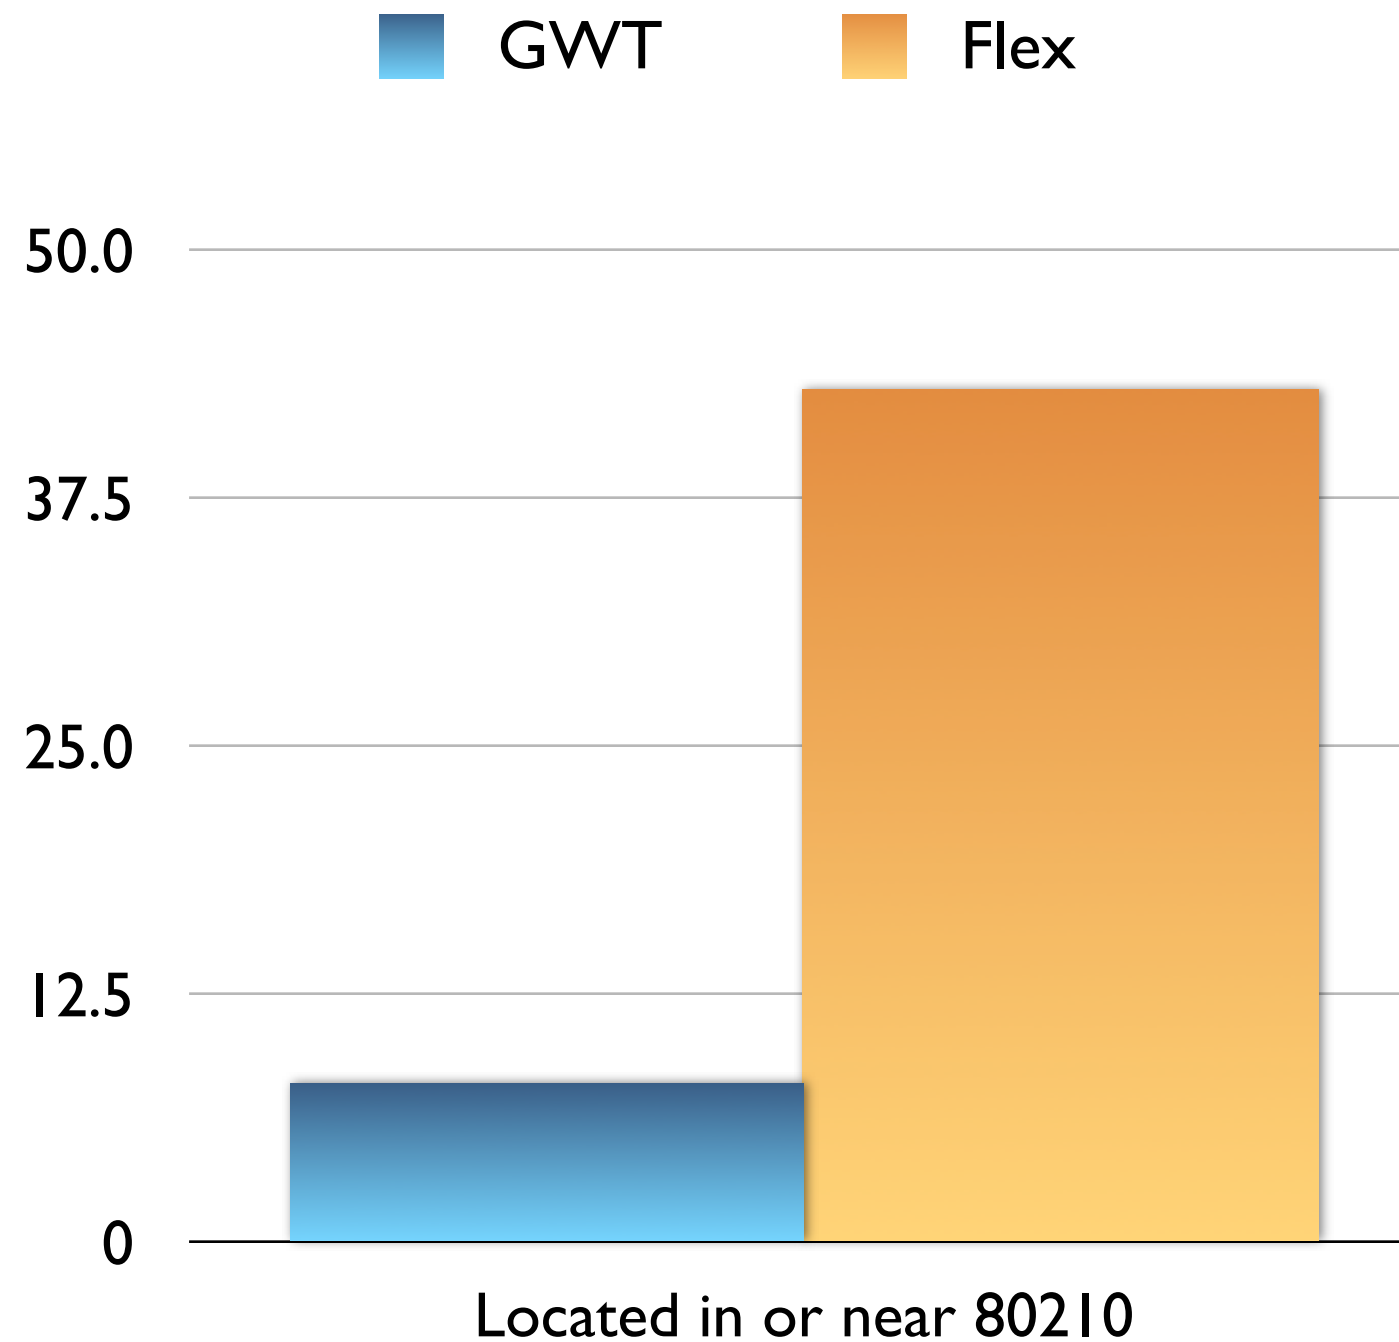

- ▶ Ajax vs. Flex
 - ▶ <http://anthonyfranco.wordpress.com/2007/06/22/flex-and-ajax-friends-or-foes>
- ▶ Use the Best Tool for the Job
 - ▶ Open Web: Ajax
 - ▶ Video and Rich Media: Flex
 - ▶ HTML Rendering: Ajax
 - ▶ Vector Graphics and Bitmap Manipulation: Flex
 - ▶ Accessibility: Flex

Flex vs. Ajax Performance

Project Support and Licensing

- ▶ Grails - <http://grails.org>
- ▶ Apache 2.0 License
- ▶ Active Community @ <http://grails.org/Community>
- ▶ Training from G2One and No Fluff Just Stuff
- ▶ The 2G Experience
- ▶ Recommended Books:
 - ▶ Getting Started with Grails by Jason Rudolph
 - ▶ Groovy Recipes by Scott Davis
 - ▶ Programming Groovy by Venkat Subramaniam
 - ▶ Beginning Groovy and Grails by Judd, Nusairat and Shingler

Project Support and Licensing

- ▶ Ruby on Rails - <http://rubyonrails.org>
- ▶ MIT License
- ▶ Active Community @ <http://www.rubyonrails.org/community>
- ▶ Training from The Pragmatic Studio and many others
- ▶ RailsConf and The Rails Edge
- ▶ Recommended Books:
 - ▶ Agile Web Development with Rails by Thomas and DHH
 - ▶ Rails for Java Developers by Hallway and Gehtland
 - ▶ Practical JRuby on Rails by Ola Bini
 - ▶ The Rails Way by Obie Fernandez

Adobe Flex

- ▶ Adobe Flex - <http://www.adobe.com/products/flex>
- ▶ Flex SDK under Mozilla Public License
- ▶ Active Community
 - ▶ Yahoo Group: <http://tech.groups.yahoo.com/group/flexcoders>
 - ▶ User Groups: http://flex.org/usergroups_list
- ▶ 360|Flex
- ▶ Recommended Books
 - ▶ Flexible Rails by Peter Armstrong
 - ▶ Flex 3 in Action by Tariq Ahmed
 - ▶ Flex on Java by Allmon and Anderson

Google Web Toolkit

- ▶ Google Web Toolkit - <http://code.google.com/webtoolkit>
- ▶ Apache 2.0 License
- ▶ Active Community
 - ▶ <http://groups.google.com/group/Google-Web-Toolkit>
- ▶ Pearson's Google Web Toolkit Conference and Google I/O
- ▶ Recommended Books
 - ▶ GWT in Action by Hanson and Tacy
 - ▶ GWT in Practice by Cooper and Collins
 - ▶ Google Web Toolkit Solutions by Geary and Gordon
 - ▶ Pro Web 2.0 Application Development with GWT by Jeff Dwyer

Conclusion

- ▶ Rails is more mature and supports RESTifying a database better.
- ▶ Framework and Language performance doesn't == scalability.
- ▶ Grails may be faster from a requests per second standpoint.
- ▶ Flex/Flash is not as restricted by the browser sandbox.
- ▶ Flex supports REST better.
- ▶ GWT works best if UI and backend are in same project.
- ▶ SOFEA UIs are fun, but not for every application.
- ▶ **Don't Believe The Hype!**
 - ▶ Prototype and draw your own conclusions.

Questions?
